

MAGENTO2 CONNECTOR V2

2.4.4 VERSION

Adobe has upgraded Magento2 to the latest 2.4.4 version, and so have we. Presenting the new V2 connector for Magento2 that packs a punch of power, enabling a smoother and faster flow of data between Netsuite and your Magento store. This new connector upgrade is compatible with the latest Adobe Commerce versions and follows the latest authentication protocols.

The Magento2 Connector V2 has the following features:

01

Works on the producer consumer architecture, making flow of data to and from Magento2 much more robust

02

Utilizes the customizability of Magento2 to full extent and allows addition of customizations to meet your business needs

03

Allows instant sync of invoices, fulfillments, refunds and much more. This real-time syncing capability empowers you to maintain accurate and up-to-date records across both Netsuite and Magento2, streamlining your workflow and reducing manual efforts.

04

Packed with even more features, now gives you the option to either instantly sync your shipments, invoices and refunds from Netsuite to Magento2 or set up a scheduled delay for export. This feature provides you with the flexibility to align data transfers with your operational preferences and optimize resource allocation accordingly.

05

Faster item export, supporting seamless inventory sync with support for a number of other item fields.

06

An interactive dashboard that gives you an insight into your business, showing the recently synced records and much more

07

Support for resyncing of records that failed to sync

In conclusion, the new V2 connector for Magento2 brings substantial improvements in data integration, customization capabilities, synchronization efficiency, and overall user experience. By embracing the latest version of Magento2 and leveraging the advanced features of the V2 connector, you can confidently manage your business operations while enjoying seamless connectivity between Netsuite and your Magento store.
